REV-TRAC CASE STUDY

# OneSteel simplifies SAP change management with Rev-Trac

## Introduction

This case study of OneSteel is based on a December 2018 survey of Rev-Trac customers by TechValidate, a 3rd-party research service.

> " **I have ABAP experience and a developer-focused background, so I found the configuration to be quite easy to understand and quick to implement. The consultant we worked with was very knowledgeable and could answer all our questions.**"

## Challenges

OneSteel's history in the manufacture and supply of steel solutions and products to the construction of nation-building infrastructure in Australia spans more than 100 years. The business is also a trusted supplier to the manufacturing, housing, mining and agricultural industries.

With more than 5,000 employees and over 200 locations Australia wide, OneSteel, enables the construction of steel-framed buildings, buildings framed in concrete and nation-building infrastructure projects.

To more efficiently manage its N and N+1 SAP environment, the steel solutions supplier had to simplify its change management processes. So, it selected Rev-Trac – the SAP DevOps platform – to deliver faster, better and safer SAP applications and enhancements at lower costs.

## Use Case

Rev-Trac has successfully addressed a number of challenges across OneSteel's SAP landscape.

The automation solution has enabled the steel solutions supplier increase the volume and velocity of SAP change while reducing the change-related production incidents within their SAP environment.

According to OneSteel, Rev-Trac is to configure. The automated SAP DevOps platform was productive less than one month after the initial implementation.

## Results

Prior to the implementation of Rev-Trac, it would take 1-2 hours to identify and fix an overtake/overwrite error. With Rev-Trac, OneSteel receives 4-6 potentially dangerous overtake and overwrite error alerts on a monthly basis.

It has also enabled the business to:
o reduce manual effort
o reduce time on audit tasks
o reduce production errors
o reduce manual retrofit effort

### Company Profile

Company:
**OneSteel**

Company Size:
**Large Enterprise**

Industry:
**Metals & Mining**

### About Rev-Trac

Rev-Trac is the SAP DevOps orchestration platform. The solution Automates ABAP Transports and Cloud, while the 3rd party integrations and highly flexible workflows allow any organisation to build a unified SAP DevOps strategy for complex SAP landscapes.
